This 12" High Fidelity AXIOM 150 Mark II model has a twin curvilinear diaphragm. A carefully designed magnet assembly using anisotropic material provides a total flux of 158,000 maxwells on a 1 $\frac{3}{4}$ " pole. The back centering device is a dustproof bakelised linen disc with concentric corrugations. The combination of these features gives this precision built loudspeaker an extremely smooth coverage from 30 to 15,000 c.p.s. with bass modulation effects reduced to an absolute minimum. This ideal high fidelity reproducer will appeal to the connoisseur of wide range sound reproduction, and in particular to the discriminating record listener.

Owing to the wide frequency coverage of this unit, it is important to remember that the ultimate quality of reproduction depends also upon the degree of perfection of the input to the Loudspeaker.
